AI Sevak Portal — Presentation Narrative

1) Problem We Are Solving

SRLC's seva operations are growing, but volunteer coordination is still fragmented across manual processes and informal channels.

Current Pain Points

- Volunteer onboarding and seva joining are often inconsistent and partially off-paper.
- Communication is spread across disconnected groups, causing missed updates and repeated instructions.
- Seva leaders spend significant time on repetitive onboarding and follow-up.
- Effort tracking, reporting, and impact storytelling are hard due to unstructured data.
- As volunteer volume increases, process quality and governance become difficult to maintain.

Why It Matters Now

- The mission is scaling across more projects and contributors.
- Without process standardization, leadership bandwidth gets consumed by coordination overhead.
- A structured platform is needed to preserve quality while scaling service delivery.

---

2) Proposed Solution

The AI Sevak Portal is a unified internal platform for the full volunteer lifecycle.

Core Product Modules

- Registration and profile setup (skills, availability, location, interests).
- Seva discovery and AI-assisted allocation guidance.
- Structured onboarding (general + seva-specific + progress briefings).
- Calendar and hours logging.
- Seva-scoped in-app messaging.
- Daily/weekly logs with text, image, and video.
- Authorized expense logging with document attachments.
- Role-based dashboards with approvals and moderation.

AI's Role (Assistive, Not Autonomous)

- Recommends suitable sevas using profile and availability data.
- Answers onboarding questions from approved internal content.
- Summarizes ongoing seva progress for joiners and leaders.
- Drafts periodic timeline summaries for human review.

Expected Operational Outcomes

- Faster volunteer-to-seva matching.
- Reduced repetitive manual onboarding.
- Better visibility for leaders and trustees.
- Stronger data backbone for impact communication.

Donation-to-Impact Storytelling Layer

- Moderated logs data (text/image/video) is converted into structured impact timelines.
- Each approved story links contribution inputs to seva activities and outcomes.

- Leadership-approved story cards and monthly digests show where support is going and what is changing on ground.
- This enables transparent, dignified communication for both beneficiaries and supporters.

---

3) Who Inside SRLC Uses and Benefits

Primary User Groups

- C4 Sevaks (Volunteers): clearer joining process, fewer coordination gaps, better visibility of responsibilities.
- C3 Seva Coordinators/Managers: smoother day-to-day tracking, follow-up, and communication.
- C2 Seva Leaders: reduced admin load, improved approvals and team readiness.
- C1 Trustees/Leadership: portfolio-level visibility across seva operations and outcomes.
- Platform/Admin Team: governance controls, moderation workflows, and system oversight.

Beneficiaries by Value Type

- **Operational efficiency:** C2/C3 teams spend less time on repetitive tasks.
- **Volunteer experience:** C4 users get a cleaner, structured journey.
- **Decision quality:** C1/C2 get more reliable and timely operational data.
- **Institutional memory:** all teams benefit from timeline archives and searchable history.

---

4) Roadmap and Success Milestones (Practical Plan)

> *Planning baseline: 3-member team (Dhairya Veera, Tanvi Savani, Avani Jariwala).*
> *Hard build deadline: **31 August 2026**.*
> *Offering milestone: **26 September 2026** (Bapa's 60th birthday; reverentially referring to Pujya Gurudevshri Rakeshji).*

Phase 0 — April 2026 (Definition and Alignment)

- Finalize PRD, role matrix (C1–C4 + admin), and governance rules.
- Confirm MVP scope and acceptance criteria for V1.
- Align with overlapping teams at interface level (details to be expanded later).

Phase 1 — May 2026 (V1 Core Operations MVP)

- Registration, profile, seva catalog, and basic join/request workflow.
- Basic role-based dashboard views.
- Calendar/hours logging (foundational version).

Phase 2 — June 2026 (V2 Collaboration and Tracking)

- In-app seva messaging.
- Logs and timeline with media uploads.
- Leader/admin moderation and publish controls.

Phase 3 — July 2026 (V3 AI Assistance + Pilot)

- AI allocation guidance (v1 rules-based).
- AI onboarding Q&A and progress brief summaries.
- Pilot rollout in selected sevas; fix critical flow gaps.

Phase 4 — August 2026 (Stabilization and Offering-Ready Build)

- Improve reliability, dashboards, and reporting quality.
- Finalize donor/beneficiary impact storytelling outputs from verified logs.
- Freeze core scope and complete offering-ready review by 31 August.

Phase 5 — September 2026 (Showcase Readiness)

- Prepare presentation/demo narrative and stakeholder walkthrough.
- Run controlled UAT and polish only critical fixes.
- Package the project for offering on 26 September.

What Success Looks Like by 26 September 2026

- Majority of pilot sevas onboarded on the portal process.
- Significant reduction in manual onboarding repetition.
- Faster volunteer allocation turnaround.
- Consistent weekly logging and improved reporting visibility.
- Clear storytelling view of how contributions are creating measurable impact.
- Clear decision on next version scope and scaling strategy.

---

5) Key Technical and Operational Dependencies

Technical Dependencies (High-Level)

- Secure authentication and role-based authorization model.
- Reliable storage for profile data, logs, and media.
- Notification mechanism for reminders and approvals.
- AI service integration for recommendations and summarization.
- Audit logging and moderation capabilities for governance.

Operational Dependencies

- Finalized SOP content for general and seva-specific onboarding.
- Role ownership clarity across C1/C2/C3/C4 and admin functions.
- Seva leaders' participation in piloting and feedback loops.
- Data discipline (timely profile completion, logs, and approvals).
- Story governance process (review, consent, privacy, and publish rules).
- Coordination points with other teams working on overlapping initiatives.

Dependency Status Note

These dependencies will be refined further once the main product document's implementation-level sections are finalized and reviewed with stakeholders.
